PREFACE TO FIRST EDITION.

THE want of an introduction to the study of Old-English has long been felt. Vernon's Anglo-Saxon Guide was an admirable book for its time, but has long been completely antiquated. I was therefore obliged to make my Anglo-Saxon Reader a somewhat unsatisfactory compromise between an elementary primer and a manual for advanced students, but I always looked forward to producing a strictly elementary book like the present one, which would enable me to give the larger one a more scientific character, and would at the same time serve as an introduction to it. Meanwhile, however, Professor Earle has brought out his Book for the beginner in Anglo-Saxon. But this work is quite unsuited to serve as an introduction to my Reader, and will be found to differ so totally in plan and execution from the present one as to preclude all idea of rivalry on my part. We work on lines which instead of clashing can only diverge more and more.

My main principle has been to make the book the easiest possible introduction to the study of Old-English.

Poetry has been excluded, and a selection made from the easiest prose pieces I could find. Old-English original prose is unfortunately limited in extent, and the most suitable pieces (such as the voyages of Ohthere and Wulfstan) are already given in the Reader; these I could not give over

vi PREFACE.

again. But I hope the short extracts from the Chronicle and the Martyrdom of King Edmund will be found not wanting in interest. For the rest of the selections I have had to fall back on scriptural extracts, which have the great advantages of simplicity and familiarity of subject. The Gospel extracts have been transferred here from the Reader, where they will be omitted in the next edition. The sentences which head the selections have been gathered mainly from the Gospels, Ælfric's Homilies, and the Chronicle. They are all of the simplest possible character, only those having been taken which would bear isolation from their context. They are intended to serve both as an introduction and as a supplement to the longer pieces. They are grouped roughly into paragraphs, according to the grammatical forms they illustrate. Thus the first paragraph consists mainly of examples of the nominative singular of nouns and adjectives, the second of accusative singulars, and so on.

The spelling has been made rigorously uniform throughout on an early West-Saxon basis. Injurious as normalizing is to the advanced student, it is an absolute necessity for the beginner, who wants to have the definite results of scholarship laid before him, not the confused and fluctuating spellings which he cannot yet interpret intelligently. Even for purely scientific purposes we require a standard of comparison and classification, as in the arrangement of words in a dictionary, where we have to decide, for instance, whether to put the original of hear under \bar{e} , $\bar{r}e$, \bar{r} or \bar{y} . The spelling I here adopt is, in fact, the one I should recommend for dictionary purposes. From early West-Saxon it is an easy step both to late W. S. and to the Mercian forms from which Modern English is derived. That I give Ælfric in a spelling slightly earlier than his date is no more unreason-

able than it is for a classical scholar to print Ausonius (who doubtless spoke Latin with an almost Italian pronunciation) in the same spelling as Virgil.

It is impossible to go into details, but in doubtful or optional cases I have preferred those forms which seemed most instructive to the student. Thus I have preferred keeping up the distinction between the indic. bundon and the subj. bundon, although the latter is often levelled under the former even in early MS. In the accentuation I have for the present retained the conventional quantities, which are really 'prehistoric' quantities, as I have shown elsewhere (Phil. Soc. Proc. 1880, 1881). It is no use trying to disguise the fact that Old English philology (owing mainly to its neglect in its native land) is still in an unsettled state.

In the Grammar I have cut down the phonology to the narrowest limits, giving only what is necessary to enable the beginner to trace the connection of forms within the language itself. Derivation and syntax have been treated with the same fulness as the inflections. In my opinion, to give inflections without explaining their use is as absurd as it would be to teach the names of the different parts of a machine without explaining their use, and derivation is as much a fundamental element of a language as inflection. The grammar has been based throughout on the texts, from which all words and sentences given as examples have, as far as possible, been taken. This I consider absolutely essential in an elementary book. What is the use of a grammar which gives a number of forms and rules which the learner has no occasion to apply practically in his reading? Simply to cut down an ordinary grammar and prefix it to a selection of elementary texts, without any attempt to adapt them to one another, is a most unjustifiable proceeding.

In the Glossary cognate and root words are given only when they occur in the texts, or else are easily recognizable by the ordinary English reader.

All reference to cognate languages has been avoided. Of course, if the beginner knows German, the labour of learning Old English will be lightened for him by one half, but he does not require to have the analogies pointed out to him. The same applies to the relation between Old and Modern English. To trace the history of the sounds would be quite out of place in this book, and postulates a knowledge of the intermediate stages which the beginner cannot have.

The Notes consist chiefly of references to the Grammar, and are intended mainly for those who study without a teacher. As a general rule, no such references are given where the passage itself is quoted in the Grammar.

On the whole I do not think the book could be made much easier without defeating its object. Thus, instead of simply referring the student from signt to siandan, and thence to the Grammar, I might have saved him all this trouble by putting 'signi, 3 sg. pres. of siandan, stand,' but the result would be in many cases that he would not look at the Grammar at all—surely a most undesirable result.

Although I have given everything that I believe to be necessary, every teacher may, of course, at his own discretion add such further illustrations, linguistic, historical, antiquarian, or otherwise, as he thinks likely to instruct or interest his pupils.

My thanks are due to Professor Skeat, not only for constant advice and encouragement in planning and carrying out this work, but also for help in correcting the proofs.

In conclusion I may be allowed to express a hope that this little book may prove useful not only to young beginners, but also to some of our Professors of and Examiners in the English language, most of whom are now beginning to see the importance of a sound elementary knowledge of 'Anglo-Saxon'—a knowledge which I believe this book to be capable of imparting, if studied diligently, and not hurriedly cast aside for a more ambitious one.

PREFACE TO THIRD EDITION.

In the present edition I have put this book into what must be (for some time at least) its permanent form, making such additions and alterations as seemed necessary.

If I had any opportunity of teaching the language, I should no doubt have been able to introduce many other improvements; as it is, I have had to rely mainly on the suggestions and corrections kindly sent to me by various teachers and students who have used this book, among whom my especial thanks are due to the Rev. W. F. Moulton, of Cambridge, and Mr. C. Stoffel, of Amsterdam.

GRAMMAR.

THE oldest stage of English before the Norman Conquest is called 'Old English,' which name will be used throughout in this book, although the name 'Anglo-Saxon' is still often used.

There were several dialects of Old English. This book deals only with the West-Saxon dialect in its earliest form.

SOUNDS.

VOWELS.

The vowel-letters in Old English had nearly the same values as in Latin. Long vowels were occasionally marked by ('), short vowels being left unmarked. In this book long vowels are marked by ('). The following are the elementary vowels and diphthongs, with examples, and key-words from English, French (F.), and German (G.):—

-54	\mathbf{a}	as in	mann (G.)		nama (name).
110	ā	2)	father	•	stān (stone).
-	æ	2)	man		glæd (glad).
٠,	æ	,,			dæd (deed)1.
-	е	,,	_ été (F.)		ic ete 2 (I eat).
~	ē	"	eté (F.) see (G.)		hē (he).
74	,ę	29	men		menn (men).

Where no key-word is given for a long vowel, it must be pronounced exactly like the corresponding short one, only lengthened.

² Both vowels.

i	as in	fini (F.)	cwic (alive).
ī	,,,	sieh (G.)	win (wine).
ie	33	fin	ieldran (ancestors).
īе	,,		hīeran (<i>hear</i>).
0	51	beau (F.)	god (god).
ō	"	so (G.)	gōd (good).
u	17	sou (F.)	sunu (son).
ū	33	gut (G.)	nū (<i>now</i>).
y	,,	vécu (F.)	synn (sin).
ÿ	. 55	grün (G.)	bryd (<i>bride</i>).
ea	=	æ+a	eall (all).
ēa.	=	壶+a	ēast (east).
eo	=	e+0	weorc (work).
ēо	=	ē+o	dēop (deep).
			- ` . ,

e and g are both written e in the MSS.

The diphthongs are pronounced with the stress on the first element.

Those who find a difficulty in learning strange vowel-sounds may adopt the following approximate pronunciation:—

The pronunciation given in parentheses is the nearest that can be expressed in English letters as pronounced in Southern English.

CONSONANTS.

Double consonants must be pronounced double, or long, as in Italian. Thus sunu (son) must be distinguished from sunue (sun) in the same way as penny is distinguished from penknife. So also in (in) must be distinguished from inn (house); noting that in modern English final consonants in accented monosyllables after a short vowel are long, our in and inn both having the pronunciation of Old English inn, not of O. E. in.

c and g had each a back (guttural) and a front (palatal) pron., which latter is in this book written ϵ, g .

c = k, as in cēne (bold), cnāwan (know).

 $\dot{\mathbf{c}} = kj$, a k formed in the j (English y) position, nearly as in the old-fashioned pron. of sky: \dot{cirice} (church), stycce (piece), \dot{pencan} (think).

g initially and in the combination ng was pron. as in 'get': $g\bar{o}d$ (good), lang (long); otherwise (that is, medially and finally after vowels and l, r) as in German sagen: dagas (days), burg (city), $h\bar{a}lga$ (saint).

ġ initially and in the combination nġ was pronounced gj (corresponding to kj): ġē (ye), ġeorn (willing), sprenġan (scatter); otherwise = j (as in 'you'): dæġ (day), vurēġan (accuse), herġian (ravage). It is possible that ġ in ġe-boren (born) and other unaccented syllables was already pronounced j. ċġ = ġġ: sęċġan (say), hryċġ (back).

f had the sound of v everywhere where it was possible:—
faran (go), of (of), ofer (over); not, of course, in oft (often),
or when doubled, as in offrian (offer).

h initially, as in hē (he), had the same sound as now. Everywhere else it had that of Scotch and German ch in loch;—hēah (high), Wealh (Welshman), riht right). hw, as in hwat (what), hwil (while), had the sound of our wh; and hl, hn, hr differed from l, n, r respectively precisely as wh differs from w, that is, they were these consonants devocalized, hl being nearly the same as Welsh II:—hlāford (lord), hlūd (loud); huappian (doze), hnutu (nut); hrape (quickly), hrēod (reed).

r was always a strong trill, as in Scotch:— $r\bar{c}ran$ (to raise), $h\bar{e}r$ (here), zvord (word).

s had the sound of z:—sētan (seek), svā (so), võis (wise), ārīsan (rise); not, of course, in combination with hard consonants, as in stān (stone), fæst (firm), rītsian (rule), or when double, as in cyssan (kiss).

) had the sound of our th (=dh) in then:— $\hbar\bar{u}$ (thou), ping (thing), $s\bar{o}p$ (true), $h\bar{a}pen$ (heathen); except when in combination with hard consonants, where it had that of our th in thin, as in $s\bar{c}ep$ (seeks). Note hafp (has)=havdh.

w was fully pronounced wherever written:—writan (write), nīwe (new), sēow (sowed prel.).

STRESS.

The stress or accent is marked throughout in this book, whenever it is not on the first syllable of a word, by (') preceding the letter on which the stress begins. Thus for giefan is pronounced with the same stress as that of forgive, and swaru with that of auswer.

PHONOLOGY.

VOWELS.

Different vowels are related to one another in various ways in O. E., the most important of which are *mutation* (German *umlaut*) and *gradation* (G. ablaut).

The following changes are mutations:-

a..e:—mann, pl.menn; wand (wound prl.), wendan (to turn).
ea (=a)..ie (=e):—eald (old), ieldra (older); feallan (fall), fielp (falls).

ā..ē:—blāwan (to blow), blæwþ (bloweth); hāl (sound), hālan (heal).

u..y:—burg (city), pl. byrig; trum (strong), trymman (to strengthen).

o.y:—gold, gylden (golden); coss (a kiss), cyssan (to kiss).

e. i:—beran (to bear), birely (beareth); cwepan (speak), cwide (speech).

eo (=c)..ie (=i):—heord (herd), hierde (shepherd); ceorfan (cut), cierfp (cuts).

u..o:-curon (they chose), ge coren (chosen).

u.... y:—cūþ (known), cypan (to make known); fūl (foul), ā·fylan (defile).

ō. . ō:—sohte (sought prt.), sēcan (to seek); foda (food), fedan (to feed).

ēa.. īo:—hēawan (to hew), hīewp (hews); tēam (progeny), tīeman (teem).

eo.. ie:—steor (rudder), stieran (steer); ġe streon (possession), ġes trienan (gain).

Before proceeding to gradation, it will be desirable to describe the other most important vowel-relations.

a, we, ea. In O.E. original a is preserved before nasals, as in mann, lang, nama (name), and before a single consonant followed by a, u, or o, as in dagas (days), dagum (to days), faran (go), gafol (profit), and in some words when e follows, as in ie fare (I go), faren (gone). Before r, l, h followed by another consonant, and before x it becomes ea, as in heard (hard), eall (all), eald (old), eahla (eight), weaxan (to grow). Not in barst (p. 7). In most other cases it becomes a:—dag (day), dages (of a day), fast (firm), war (wary).

e before nasals always becomes *i*: compare *bindau* (to bind), pret. *band*, with *berau* (to bear), pret. *bar*.

e before r (generally followed by a consonant) becomes eo:—eorpe (earth), heorte (heart). Not in berstan (p. 7). Also in other cases:—seolfor (silver), heofon (heaven).

i before r + cons. becomes ie:—bierp (beareth) contr. from birep, hierde (shepherd) from heard (herd), wiersa (worse).

ę before r, or l + cons. often becomes ie :—fierd (army) from faran, bieldo (boldness) from beald, ieldra (elder) from eald.

By gradation the vowels are related as follows:-

e (i, eo) . . a (æ, ea) . . u (o):--

bindan (inf.), band (pret.), bundon (they bound). beran (inf.), bær (pret.), boren (past partic.). ceorfan (cut), cearf (pret.), curfon (they cut), corfen (past partic.). bend (bond) = mutation of band, byr-pen (burden) of bor-en.

a (æ, ca). $\vec{\varpi}$:—spræc (spoke), spræcon (they spoke), spræc (speech).

a..ō:—faran (to go), for (pret.), for (journey). ģefēra (companion) mutation of for.

ī..ā..i:—wrītan, wrāt, wrīton, ģewrit (writing, subst.). (be) līfan (remain), lāf (remains), whence by mutation læfan (leave).

ēo (ū)..ēa..u (o):—ċēosan (choose), ċēas, curon, coren. cys-t (choice). (for)·lēosan (lose), lēas (loose), ā·līesan (release), losian (to be lost). būgan (bend), boga (bow).

We see that the laws of gradation are most clearly shown in the conjugation of the strong verbs. But they run through the whole language, and a knowledge of the laws of gradation and mutation is the main key to O.E. etymology.

It is often necessary to supply intermediate stages in connecting two words. Thus letgan (lay) cannot be directly referred to liegan_(lie), but only to a form *lag-, preserved in the preterite læg. So also lbendan (to blind) can be referred only indirectly to the adjective blind through an intermediate *bland-. Again, the root-vowel of byrpen

(burden) cannot be explained by the infinitive beran (bear), but only by the past participle geboren. In the same way hrpre (fall sb.) must be referred, not to the infinitive hreosan, but to the preterite plural hruron.

The yowel-changes in the preterites of verbs of the 'fall'-conjugation (1) feallan, feoll, &c., are due not to gradation, but to other causes.

CONSONANTS.

s becomes r in the preterite plurals and past participles of strong verbs, as in *curon*, *gecoren* from *tēosan*, $w\bar{w}ron$ pl. of $w\bar{w}s$ (was), and in other formations, such as *hryre* (fall) from *hrēosan*.

p becomes d under the same conditions, as in wurdon, gerworden from weorpan (become), cwap (quoth), pl. cwādon, cwide (speech) from cwepan (infin.).

r is often transposed, as in iernan (run) from original *rinuan (cp. the subst. ryne), berstan (burst) from *brestan, bærst (burst pret.) from bræst, hors (horse) from *hross.

The combinations cae, gue- become tea-, gua-, as in teaf (chaff) from *caef, steal (shall) from *scal, geaf (gave)=*guef from giefan (cp. cwap from cwepan), geat (gate)—cp. fut (vessel).

gæ- often becomes ¿ēa-, as in ¿ēafon (they gave), with which compare cwādon (they said).

ge- becomes gie, as in giefan, gieldan (pay) from *gefan, *geldan—cp. eweban, delfan. Not in the prefix ge- and ge (ye).

When g comes before a consonant in inflection, it often becomes h, as in hē līehb (he lies) from lēogan (mentiri).

h after a consonant is dropt when a vowel follows, the preceding vowel being lengthened, thus Wealh (Welshman) has plural Wēalas.

INFLECTIONS.

NOUNS.

Gender. There are three genders in O.E.—masculine, neuter, and feminine. The gender is partly natural, partly

grammatical. By the natural gender names of male beings, such as se mann (the man), are masculine; of female beings, such as seo dohtor (the daughter), are feminine; and of young creatures, such as pæt cild (the child), neuter. Note, however, that pæt wif (woman) is neuter.

Grammatical gender is known only by the gender of the article and other words connected with the noun, and, to some extent, by its form. Thus all nouns ending in -a, such as se mona (moon), are masculine, seo sunne (sun) being feminine. Those ending in -dom, -had, and -stipe are also masculine:—se wisdom (wisdom), se tildhad (childhood), se freondstipe (friendship). Those in -nes, -o (from adjectives) -ræden, and -neng are feminine:—seo rihtwisnes (righteousness), seo bieldo (boldness) from beald, seo mann-ræden (allegiance), seo scotung (shooting).

Compounds follow the gender of their last element, as in pat burg-geat (city-gate), from seo burg and pat geat. Hence also se wif-mann (woman) is masculine.

The gender of most words can be learnt only by practice, and the student should learn each noun with its proper definite article.

Strong and Weak. Weak nouns are those which form their inflections with n, such as se $m\bar{o}na$, plural $m\bar{o}nan$; seo sunne, genitive sing. $b\bar{c}e$ sunnan. All the others, such as se $da\dot{c}e$, pl. dagas, bat $h\bar{u}s$ (house), gen. sing. bas bas bas are strong.

Cases. There are four cases, nominative, accusative, dative, and genitive. The acc. is the same as the nom. in all plurals, in the sing. of all neuter nouns, and of all strong masculines. Masculine and neuter nouns never differ in the plural except in the nom. and acc., and in the singular they differ only in the acc. of weak nouns, which in neuters is the same as the nom. The dative plural of nearly all nouns ends in -um.

STRONG MASCULINES.

(1) as-plurals.

	SINGULAR.		PLURAL.		
		stān (sione).	Nom.	stān-as.	
	Dat.	stān-e.	Dat.	stãn-um.	
١	Gen.	รุเรีก-คร.	Gen	etān_o	

So also dæl (part), cyning (king), éildhad (childhood).

dag (day) changes its vowel in the pl. (p. 5):—dæg, dæge, dæges; dagas, dagum, daga.

Nouns in -e have nom. and dat. sing. the same:—ende, (end), ende, endes; endas, endum, enda.

Nouns in -el, -ol, -um, -en, -on, -er, -or often contract:—
engel (angel), engle, engles; englas, englum, engla. So also
nægel (nail), begen (thane), ealdor (prince). Others, such as
æcer (field), do not contract.

h after a consonant is dropped in inflection (p. 7), as in feorh (life), feore, feores. So also in Wealh (Welshman), plur. Wealas.

There are other classes which are represented only by a few nouns each.

(2) e-plurals.

A few nouns which occur only in the plur.:—lēode (people), lēodum, lēoda. So also several names of nations:—Engle (English), Dene (Danes); Seaxe (Saxons), Micrèe (Mercians), have gen. plur. Seaxua, Micrèna.

(3) Mutation-plurals.

SINGULAR. PLURAL,

Nom. fot (foot). Nom. fet.

Dat. fet. - Dat. fot-um.

Gen. fot-es. Gen. fot-a.

So also top (tooth). Mann (man), menn, mannes; menn, mannum, manna.

Wherever the acc. is not given separately, it is the same as the nom.

(4) u-nouns.

SINGULAR. PLURAL.

Nom. sun-u (son). Nom. sun-a.

Dat. sun-a. Dat. sun-um.

Gen. sun-a. Gen. sun-a.

So also wudu (wood).

(5) r-nouns (including feminines).

SINGULAR. PLURAL.

Nom. modor (mother). Nom. modor.

Dat. meder. Dat. modr.um.

Gen. modor. Gen. modr.a.

So also bropper (brother); fæder (father), dohter (daughter), have dat. sing. fæder, dehter.

(6) nd-nouns.

Formed from the present participle of verbs.

Nom. freend (friend).

Dat. freend.

Gen. freend-es.

PLURAL.

Nom. friend.

Dat. freend-um.

Gen. freend-a.

So also feond (enemy).

Those in -end inflect thus:—būend (dweller), būend, būendes; būend, būendum, būendra. So also Hālend (saviour). The -ra is an adjectival inflection.

STRONG NEUTERS.

· (1) u-plurals.

SINGULAR.

Nom. scip (ship). :

Dat. scip-e.

Gen. scip-es.

Plura'l.

Nom. scip-u.

Dat. scip-um.

Gen. scip-es.

Gen. scip-a.

So all neuters with short final syllable, such as *gebed* (prayer), *gewrit* (writing), *geat* (gate).

Fæt (vessel), fæte, fætes ; faiu, fatum, fata (p. 5).

Rīće (kingdom), rīće, rīćes; rīću, rīćum, rīća. So also all neuters in e, except heorie and ēare (p. 13): ģe hēode (language), stytėe (piece).

Those in -ol, -en, -or, &c. are generally contracted:—dēofol (devil), dēofics, dēofiu. So also wæpen (weapon), mynster (monastery), wuudor (wonder).

(2) Unchanged plurals.

SI	NGULAR.	PLURAL.		
Nom.	hūs (<i>house</i>).	Nom.	hūs.	
Dat.	hūs-e.	Dai.	hūs-um.	
Gen.	hūs-es.	Gen.	hūs-a.	

So all others with long final syllables (that is, containing a long vowel, or a short vowel followed by more than one consonant), such as bearn (child), folc (nation), wif (woman).

Feoh (money) drops its h in inflection and lengthens the co:-feoh, feo, feos. So also blech (colour).

STRONG FEMININES.

(1) a-plurals.

SINGULAR.			PLURAL.		
(a)	Nom.	ģief-u (gift).	Nom.	ģief-a.

PROPER NAMES.

Native names of persons are declined like other nouns:— Ælfred, gen. Ælfredes, dat. Ælfrede; Ēad-burg (fem.), gen. Ēadburge, &c.

Foreign names of persons sometimes follow the analogy of native names, thus *Crīsts*, *Salomon* have gen. *Crīstes*, *Salomones*, dat. *Crīste*, *Salomone*. Sometimes they are declined as in Latin, especially those in -us, but often with a mixture of English endings, and the Latin endings are used

somewhat loosely, the accus. ending being often extended to the other oblique cases; thus we find nom. Cyrus, gen. Cyrus, acc. Cyrum, dat. Cyrum (pām cyninge Cyrum).

Almost the only names of countries and districts in Old English are those taken from Latin, such as Breten (Britain), Cent (Kent), Germānia (Germany), and those formed by composition, generally with land, such as Engla-land (land of the English, England), Israhēla-þēod (Israel). In both of these cases the first element is in the gen. pl., but ordinary compounds, such as Scot-land, also occur. In other cases the name of the inhabitants of a country is used for the country itself:—on East-englum=in East-anglia, lit. 'among the East-auglians.' So also on Angel-cynne=in England, lit. 'among the English race,' more accurately expressed by Angelcynnes land.

Uncompounded names of countries are sometimes undeclined. Thus we find on Cent, to Hierusalem.

Germānia, Asia, and other foreign names in -a take -e in the oblique cases, thus gen. Germānie.

ADJECTIVES.

Adjectives have three genders, and the same cases as mouns, though with partly different endings, together with strong and weak inflection. In the mase and neut sing they have an *instrumental* case, for which in the fem. and plur, and in the yeak inflection the dative is used.

STRONG ADJECTIVES.

Adjectives with a short syllable before the endings take v_n in the fem. sing. nom. and neut. pl. nom., those with a long one drop it.

Those with α , such as $gl\alpha d$ (glad), change it to a in dat. gladum, &c.

Those in -e, such as blipe (glad), drop it in all inflections:—blipne, blipne, blipne.

Those in -ig, -el, -ol, -en, -er, -or often contract before inflections beginning with a vowel, as in hālig (holy), hālges, hālgum; mičel (great), mičlu, mičle. Not, of course, before consonants:—hāligne, mičelne, mičelra.

Those in -u, such as *gearu* (ready), change the u into a w before vowels:—*gearwes*, *gearwe*.

Adjectives with long syllable before the endings drop the u of the fem. and neuter:—

Fela (many) is indeclinable.

WEAK ADJECTIVES.

COMPARISON.

The comparative is formed by adding -ra, and is declined like a weak adjective:—lēof (dear), lēofra masc., lēofre fem., lēofran plur., etc.; māre (famous), mārra. The superlative is formed by adding -ost, and may be either weak or strong:—lēofost (dearest).

The following form their comparisons with mutation, with superlative in -est (the forms in parentheses are adverbs):—

eald (old),	ieldra,	ieldest.
lang (long),	lęnġra	lęnġest.
nēah (near),	(nēar),	nīehst.

The others up to twentig are generally indeclinable. Those in -tig are sometimes declined like neuter nouns, sometimes like adjectives, and are often left undeclined. When not made into adjectives they govern the genitive.

Hund and pūsend are either declined as neuters or left undeclined, always taking a genitive:—eahta hund mīla (eight hundred miles), fēower pūsend wera (four thousand men).

Units are always put before tens:—ān and iwentig (twenty-one).

The ordinals are always weak, except $\bar{o}per$, which is always strong.

personal pronouns are used instead:—hie gesamnodon hie (they collected themselves, assembled); hie ārbādon him wif (they asked for wives for themselves). Self is used as an emphatic reflexive adjective agreeing with its pronoun:—swā swā hie wyston him selfum (as they wished for themselves).

POSSESSIVE.

Min (my), bin (thy), ure (our), cower (your), and the dual uncer and incer are declined like other adjectives. The genitives his (his, its), hiere (her), hiera (their) are used as indeclinable possessives.

RELATIVE.

INDEFINITE.

Indefinites are formed with swā and the interrogative pronouns, thus:—swā hwā swā, swā hwele swā (whoever), swā hwæt swā (whatever), $\bar{A}n$ and sum (some) are used in an indefinite sense:— $\bar{a}n$ mann, sum mann='a certain man,' hence 'a man.' But the indefinite article is generally not expressed.

Alc (each), $\bar{e}ni\dot{g}$ (any), $n\bar{e}ni\dot{g}$ (no, none), are declined like other adjectives.

Ōper (other) is always strong:—pā öpre menn.

Man, another form of mann, is often used in the indefinite sense of 'one,' French on:—his brobor Horsan man of slog (they killed his brother Horsa).

VERBS.

There are two classes of verbs in O. E., strong and weak. The conjugation of strong verbs is effected mainly by means of vowel-gradation, that of weak verbs by the addition of d (-ode, -ede, -de) to the root-syllable.

The following is the conjugation of the strong verb bindan (bind), which will serve to show the endings which are common to all verbs:—

INDICATIVE.	subjunctive.
Pres. sing. 1. bind-e,	bind-e.
2. bind-est, bintst,	bind-e.
3. bind-eþ, bint,	bind-e.
plur. bind-ap,	bind-en.
Pret. sing. 1. band,	bund-e.
2. bund-e,	bund-e.
3. band,	bund-e.
plur. bund-on,	bund-en.
oper wing hind · plur hind-ab.	Infin hind-at

Imper. sing. bind; plur. bind-ap. Infin. bind-an

Partic. pres. bind-ende; pret. ge-bund-en.

Gerund. to bind-enne.

For the plural bindab, both indicative and imperative, binde is used when the personal pronoun follows immediately after

the verb:— $w\bar{e}$ bindap (we bind), but binde $w\bar{e}$ (let us bind); so also $g\bar{a}p$ / (go plur.), but $g\bar{a}$ $g\bar{e}$ / (go ye).

The present participle may be declined like an adjective. Its declension when used as a noun is given above, p. 10.

The past participle generally prefixes ge-, as in gebunden, genumen from niman (take), unless the other parts of the verbs have it already, as in gehieran (hear), gehiered. It is sometimes prefixed to other parts of the verb as well. No ge is added if the verb has another prefix, such as ā-, be-, for-; thus forgiefan (forgive) has the past participle for giefen. The past participle may be declined like an adjective.

Traces of an older passive voice are preserved in the form hāt-te from hātan (call, name), which is both present 'is called,' and preterite 'was called':—se mnnuc hātte Abbo (the monk's name was Abbo).

STRONG VERBS.

In the strong verbs the plural of the pret. indic. generally has a different vowel from that of the sing. (ic band, wē bnndon). The 2nd sing. pret. indic. and the whole pret. subj. always have the vowel of the preterite plural indicative (bū bunde, ic bunde, wē bunden.)

The 2nd and 3rd persons sing, of the pres. indic. often mutate the root-vowel, thus:—

a becomes e as in (he) stent from standan (stand). fielþ feallan (fall). ie ea ,, cweban (say). i cwibb " е 22 11 weorban (happen). wierb ie eo . . . •• hātan (command). æ hætt ã ,, ,, grēwb " growan (grow). ē õ ,, hēawan (hew). hiewb " ĩe ēа ,, čeosan (choose). ċīest ēο īе ,, lūcan (close). ū ÿ lÿcþ 22

The full ending of the 3rd pers. sing. pres. indic. is -ep, which is generally contracted, with the following consonant-changes:—

```
-teb becomes -tt as in lætt from lætan (lel).
                             bīdan (wai).
           -tt .,
                   bītt
-deb
                             biddan (pray).
-ddeþ
           -tt ,, bitt
                         ..
                             cweban (say).
-þeþ
       " -bb " cwibb "
           -st " čīest "
                             ċēosan (choose).
-seþ
       99
          -nt " bint
                             bindan (bind).
-ndeb
```

Double consonants become single, as in $h\bar{e}$ fielly from feallan.

Before the -st of the 2nd pers. consonants are often dropt, as in $b\bar{u}$ cruist from cruchan, $b\bar{u}$ criest from crochan; and d becomes t, as in $b\bar{u}$ bintst from bindan.

For the changes between s and r, p and d, g and h, see p. 7.

Some verbs, such as $s\bar{e}on$ (see), drop the h and contract before most inflections beginning with a vowel:—ic $s\bar{e}o$, $w\bar{e}$ $s\bar{e}op$, $t\bar{o}$ $s\bar{e}onne$; but $h\bar{e}$ sihp.

There are seven conjugations of strong verbs, distinguished mainly by the different formation of their preterites. The following lists comprise all the strong verbs that occur in the texts given in this book, together with several others of the commoner ones.

I. 'Fall'-conjugation.

The pret. sing. and pl. has $\bar{\epsilon}o$ or $\bar{\epsilon}$, and the past partic. retains the original vowel of the infinitive.

WEAK VERBS.

There are three conjugations of weak verbs—(1) in -an, pret. -de (hīeran, hīerde, 'hear'); (2) in -ian, pret. -ede (wenian, wenede, 'wean'); (3) in -ian, pret. -ode (lufian, lufode, 'love'). The verbs of the first two conjugations nearly all have a mutated vowel in the present and infinitive, which those of the third conjugation very seldom have.

I. an-verbs.

This class of weak verbs has the same endings as the strong verbs, except in the pret and past partic., which are formed by adding -de and -ed respectively, with the following consonant changes.

-ndde becomes -nde as in sende from sendan (send).
-llde ,, -lde ,, fylde ,, fyllan (fill).
-tde ,, -tte ,, mette ,, metan (find).
-pde ,, -pte ,, dypte ,, dyppan (dip).
-cde ,, -hte ,, twhte ,, twean (show).

The past partic. is generally contracted in the same way:—send, mētt, tæht, but some of them often retain the uncontracted forms:—fylled, dypped. When declined like adjectives they drop their e where practicable:—fylled, plur. fylde; hiered, hierde.

The 2nd and 3rd pres. sing. ind. are contracted as in the strong verbs.

(a) 'Hear'-class.

INDICATIVE.			Subjunctive.
Pres. sing.	ı.	hīer-e (hear),	hīer-e.
	2.	hīer-st,	hīer-e.
	3.	hīer-þ,	hīer-e.
plur.		hīer-aþ,	hīer-en.

INDI	CATIVE		SUBJUNCTIVE.
Pres. sing. 1.	hīer-de,	•	hīer-de.
2,	hīer-dest,		hĩer-de.
3.	hīer-de,		hīer-de.
plur.	hīer-don,		hīer-den.

Imper. sing. hier; plur. hier-ap. Infin. hier-an. Pic. pres. hier-ende; pret. hier-ed.

Gerund, to hier-enne.

Further examples of this class are:-

infinitive,	Third pres.	PRET.	PARTIC, PRET.
ætīewan (<i>show</i>)	-ĭewþ	-īewde	-īewed.
cypan (make known)	сўþþ	cÿþde	cÿþed, cÿdd
fyllan (fill)	fylþ	fylde	fylled
(nea)læcan (approach)	-læćþ	-læhte	-læht
lædan (lead)	lætt	lædde	lædd
lęcgan (lay)	lęġþ	lęġde	lęġd
ge liefan (believe)	-līefþ	-lîefde	-līefed
nemnan (name)	nemneþ	nęmnde	nęmned
sęndan (send)	sent	sęnde	sęnd
settan (set)	sętt	sętte	sett
smēan (consider)	smēaþ	smēade	smēad
tæċan (show)	tæċþ	tæhte	tæht
wendan (turn)	węnt	węnde	wend

(b) 'Seek'-class.

In this class the mutated vowels lose their mutation in the preterite and past partic., besides undergoing other changes in some verbs.

Those in double consonants (and ¿ġ) simplify them in the contracted and and 3rd sing. pres. indic.:—selle, selst, selb; seige, seġst, seġst.

Imper. wen-e, wen-iap. Infin. wen-ian.

Partic. pres. wen-iende; pret. wen-ed.

Gerund. to wen-ienne.

So are conjugated all weak verbs with a short mutated root syllable, such as *ferian* (carry), *werian* (defend), *ge byrian* (befit). There are not many of them.

III. 'Love'-conjugation.

INDICATIVE.				SUBJUNCTIVE.
Pres. sing.	ı,	luf-ige (love),		luf-iġe.
	2.	luf-ast,	•	luf-iģe.
	3.	luf-ab,		luf-iģe.

Pret. sing.	ı.	luf-ode,		luf-ode.
	2,	luf-odest,		luf-ode.
	3.	luf-ode,		luf-ode.
plur.	_	luf-odon,		luf-oden.
Imper.	. lu	f-a. luf-iab.	Infin.	luf-ian.

Partic. pres. luf-iende: pret. luf-od. Gerund. to luf-ienne.

So also accian (ask), macian (make), weorpian (honour), and many others.

Irregularities.

Some verbs are conjugated partly after I, partly after III. Such are habban (have) and hibban (live).

Habban has pres. indic. hæbbe, hæfst, hæfþ; habbah, subj. hæbbe, hæbben, pret. hæfde, imper. hafa, habbah, particc. habbende, hæfd.

Libban has pres. libbe, leofast, leofap; libbap, subj. libbe, pret, leofode, imper. leofa, libbap, partice. libbende, lifiende; leofod.

Fetian (fetch) has pret. fette.

STRONG-WEAK VERBS.

The strong-weak verbs have for their presents old strong preterites, from which new weak preterites are formed. Note the occasional second person sing. in \(\lambda \).

INDICATI	SUBJUNCTIVE.

Imper. wite, witab. Infin. witan. Partic. pres. witende; pres. witen.

The other most important weak-strong verbs are given below in the 1st and 2nd sing. pres. indic., in the plur. indic., in the pret., in the infin. and partic. pret. Of several the last two forms are doubtful, or do not exist.

Āh (possess), āge, āgon; āhte; āgen (only as adjective)¹.

Cann (know) canst, cunnon; cūpe; cunnan; cūp (only as adjective.)

Dearr (dare), durre, durron; dorste. German (remember), -manst; -munde; -munan. Mæġ (can), miht, magon, mæġe (subj.); mihte. Mōt (may), mōst, mōton; mōste. Sċeal (shall), sċealt, sculon, scyle (subj.); scolde. Pearf (need), þurfon, þyrfe (subj.); þorfte; þurfan.

ANOMALOUS VERBS.

(1) Willan (will) shows a mixture of subj. forms in the pres. indic. sing.:—

Imper. gã, gāp. Infin. gān. . Partic. pres. gangende; pret. ģe gān.

DERIVATION.

PREFIXES.

The following are the most important prefixes, some of which are verbal, being confined to verbs and words formed directly from them; some nominal, being confined to nouns and adjectives.

<u>a</u>-(r) originally 'forth,' 'away,' as in arīsan, 'rise forth,' 'arise'; afaran, 'go away,' 'depart'; but generally only intensitive, as in accwellan (kill), ahrēosan (fall).

(2)=' ever' in pronouns and particles, where it gives an indefinite sense, as in ā-hwār (anywhere), ā-wiht (anything).

 \tilde{x} ė- from \bar{a} - \hat{g} e-, the \bar{a} being mutated and the e dropped, has a similar meaning, as in \bar{x} ė-hwele (each), \bar{x} ė- \bar{x} ė-hwele (either).

be-, originally 'by,' 'around' (cp. the preposition be), (1) specializes the meaning of a transitive verb, as in be settan (beset, surround), be scieran (shear); (2) makes an intransitive verb transitive, as in be pencan (consider) from pencan (think); (3) gives a privative meaning, as in be heaf dian (behead). In some words, such as be cuman (come), it is practically unmeaning.

<u>for</u>- (which is distinct from the preposition for) generally has the sense of 'loss' or 'destruction,' as in for don (destroy), for wear ban (perish). Of course, if the verb with which it is compounded already has this meaning, it acts merely as an intensitive, as in for break up, break), for serinean (shrink up). It also modifies in a bad sense generally, as in for seon (despise), or negatives, as in for beat dan (forbid).

ge- originally meant 'together,' as in gefera (fellow-traveller, companion) from feran (travel). With verbs it often signifies 'completion,' 'attainment,' and hence 'success,' as in gegān (conquer), originally 'go over,' or 'reach,' gewinnan (win) from winnan (fight). Hence generally prefixed to hieran and seon, gehieran and geseon strictly meaning 'succeed in hearing, seeing.' It is generally prefixed to past participles (p. 23), where it originally gave the meaning of completion—gelufod—'completely loved.'

mis-='mis,' as in mis-dad (misdeed).

n=me (not), as in $n\bar{a}$ (not), literally 'never,' $n\bar{\omega}fre$ (never), $m\bar{c}s$ (was not)=ne $w\bar{c}s$.

__on- as a verbal prefix has nothing to do with the preposition on. It properly signifies 'separation,' as in on lūcan (open) from lūcan (lock, close), but is often practically unmeaning, as in orginnan (begin).

or-, literally 'out of,' is privative, as in orsorg (unconcerned) from sorg. (sorrow).

to- as a verbal prefix has nothing to do with the preposition to (which occurs in to gadre, 'together,' &c.), but signifies 'separation,' as in toberstan (burst asunder), to bregdan (shake off), and hence 'destruction,' as in to caviesan (crush to pieces, bruise).

un- negatives, as in un-gesālig (unhappy).

ENDINGS.

(a) Nouns.

Personal.

-end, from the present participle -ende,='-er':-Hælend (healer, Saviour), buend (dweller).

-ere='-er':—sāwere (sower), mynetere (money-changer, minter) from mynet (coin).

-ing, patronymic, abeling (son of a noble, prince) from abele (noble).

Abstract.

-nes, fem. from adjectives:—god-nes (goodness), rihtwis-nes (righteousness).

-up, -po, fem., generally from adjectives:—ġēoguþ (youth), strengho (strength) from strang.

-ung, fem. from verbs:—scolung (shooting, shot), hergung (ravaging), from scotian, hergian.

The following are also independent words:-

-dom, masc.: -wis-dom (wisdom), pēow-dom (servitude).

-hād, masc.:—cild-hād (childhood).

-ræden, fem.:—ġe civid-ræden (agreement) from civide (speech); mann-ræden (allegiance).

-scipe, masc.:—freond-scipe (friendship). Concrete in water-scipe (piece of water, water).

(b) Adjectives.

-en, with mutation, denotes 'material,' 'belonging to':—gylden (golden), stænen (of stone), hæþen (heathen) from hæþ (heath). In seoleen (silken) there is no mutation.

-feald='-fold':-hund-feald (hundred-fold).

-iġ:-miht-iġ (mighty); hāl-iġ (holy) from hāl (whole).

-isc, with mutation:—Englise (English) from Angel; menu-isc (human) from mann.

-ol :--szvic-ol (deceitful).

-iht, with mutation, denotes 'material,' 'nature':--sten-ihi (stony).

-sum='some':-hier-sum (obedient).

The following exist (sometimes in a different form) as independent words:—

-fæst:-sōþ-fæst (truthful).

-full :--sorg-full (sorrowful), geleaf-full (believing, pious).

-leas='-less':- ar-leas (dishonoured, wicked).

-lie (cp. gerlie) = '-ly':-fole-lie (popular), heofou-lie (heavenly).

-weard='-ward':-supan-weard (southward).

VERBS.

-læcan :---an-læcan (unite), gerþwær-læcan (agree).

ADVERBS.

-e, the regular adverb-termination:—lange (long), gelice (similarly) from lang, gelic, Sometimes -lice (from -lic) is used to form adverbs, as blipe-lice (gladly) from blipe.

DERIVATIONS FROM PARTICIPLES.

Many abstract words are formed from present participles (often in a passive sense) and past participles (often in an active sense):—

-nes:—for giefen-nes (forgiveness), gereced-nes (narrative), welwillend-nes (benevolence).

-lic: --unārīmed-lic (innumerable).

-lice :- welwillend-lice (benevolently).

SYNTAX.

GENDER.

When masculine and feminine beings are referred to by the same adjective or pronoun, the adjective or pronoun is put in the neuter:—hīe ģe·samnodon hīe, ealle hā hēafod-mēum, and ēac swelce wīf-menn.. and hā hīe blīhost wāron.. (they gathered themselves, all the chief men, and also women.. and when they were most merry..). Here blīhost is in the neuter plur.

CASES.

Accusative. Some verbs of asking (a question) and requesting, together with $l\bar{\alpha}ran$ (teach), take two accusatives, one of the person, and another of the thing:— $h\bar{\imath}e$ hine ne dorston $\bar{\alpha}nig$ ping āscian (they durst not ask him anything); wē magon ēvw rād ģe lāran (we can teach you a plan).

The accusative is used adverbially to express duration of time: hvv stande ge her calve day idle? (why stand ye here all the day idle?)

Dative. The dative in Old E. is of two kinds, (1) the dative proper, and (2) the instrumental dative, interchanging with the regular instrumental. It is not always easy to separate the two.

(1) The dative proper usually designates personal relations, and is frequently used with verbs, together with an accusative (generally of the thing). The dative is also used with adjectives. It is used not only with verbs of giving, &c., as in hē sealde ālenm ānne pening (he gave each a penny); addessing, as in ic ēow seige (I say to you), hē pancode his Dryhtne (he thanked his Lord); but also with many verbs of benefiting, influencing, &c., as in ne dō ic pē nānne tēonan (I do thee no injury), hīe noldon him līefan (they would not allow

them to do so); $h\bar{e}m$ $r\bar{e}pum$ stierde (restrained the cruel ones). Also in looser constructions, to denote the person indirectly affected, benefited, &c., as in $by\bar{e}gap$ $\bar{e}ow$ ele (buy for yourselves oil). Note especially the following idiom: $h\bar{i}c$ gc $s\bar{o}hlon$ Brelene Brettum $l\bar{o}$ fullume (they came to Britain as a help to the Britains—to help them); $h\bar{e}$ clipode $Cr\bar{e}st$ him $l\bar{o}$ fullume (he called Christ to his help).

The dative is also used with adjectives of nearness, likeness, &c.:—Ēadmund cyning clipode āune biscop þe him ge hendost wæs (King Edmund summoned a bishop who was nearest at hand to him); heofona rīce is ge līc þām mangere þe söhte þæt göde meregrot (the kingdom of the heavens is like the merchant who sought the good pearl).

(2) The instrumental dative is used to denote the instrument and manner of an action: hē ģe endode yflum dēahe (he ended with an evil death). Hence its use to form adverbs, as in stēafmālum (sheafwise). It also signifies time when:—hrim ģēarum ār hām he hē forhfērde (three years before he died), which is also expressed by the instrumental itself:—sēo wolde efsiau ālee ģēare hone sauet (she used to cut the saint's hair every year); hy fēorhan ģēare his rīčes (in the fourth year of his reign). A past participle with a noun in the instrumental dative is used like the ablative absolute in Latin: Hubba be lāf on Norhhymbra-lande, ģe wunnenum siģe mid walhrēownesse (H. remained in Northumbria, victory having been won with cruelty).

Genitive. The genitive is often used in a partitive sense:—
his feouda sum (one of his enemies); hiera fif waron dysige
(five of them were foolish). Hence it is generally used with
fela, as in fela wundra (many miracles); also with numerals
when used as substantives (p. 18).

The genitive is often used like an accusative to denote the object of various emotions and mental states, such as joy, desire, remembering:—hīc þæs fægnodon swīpe (they rejoiced at it greatly); mē lēofre wære þæt ic on gefeohte feolle wiß þæm þe mīn folc möste hiera eardes brūcan (it would be pleasanter to me to fall in fight that my people might enjoy (possess) their country); ic þæs gewilnige (I desire that); gif hē his feores röhte (if he cared about his life); hē wæs þæs Hælendes gemyndig (he was mindful of – he remembered the Saviour).

Some of these verbs, such as biddan (ask), take an accusative of the person and a genitive of the thing:—hē hine hlāfes bitt (he asks him for bread).

Verbs of depriving, restraining, &c., have the same construction:—nis Angel-cynn be dæled Dryhtnes halgena (England is not deprived of the Lord's saints).

Some verbs of giving, &c., take a genitive of the thing and a dative of the person:—him was of logen ælces fodan (they were deprived of all food).

The genitive is often used to define an adjective or noun:—

bū eart wierhe sleges (thou art worthy of death); on hām gēare

he Ælfred æheling ān and twentig gēard wæs (in the year

when Prince Alfred was twenty-one).

CONCORD.

Adjectives agree with their nouns not only when used attributively (gode menn), but also when the adjective follows the noun, either predicatively or in apposition:—hā menn sind gode; hē ge seah ōhre idle standan (he saw others standing idle); hīe cōmon mid langum scipum, nā manigum (they came with long ships, not many).

APPOSITION.

In such expressions as 'the island of Britain,' the second noun is not put in the genitive, but the two are simply put in

apposition, both being declined separately:—Breten regiand, on Bretene ($p\bar{e}m$) regiande. In 'king Alfred,' &c., the proper name is put first in the same way:—Ælfred æpeling (prince Alfred); on Æpelredes cyninges dæge (in the days of king Æpelred).

There is a similar apposition with the adjective sum followed by a noun or pronoun, as in sume $b\bar{a}$ menu (some of the men); $b\bar{a}$ $b\bar{a}$ $b\bar{e}$ seow, sumu $b\bar{e}$ feolion with weg (while he sowed, some of them [the seeds] fell by the road). Sometimes the pronoun precedes, as in $b\bar{a}$ $b\bar{e}$ don $b\bar{e}$ sume $b\bar{e}$ t Samson moste him macian sum gamen (then some of them asked that Samson might make some sport for them).

Another kind of apposition occurs in instances like the following, where we have an adjective agreeing with a following noun, and denoting a part of it:—hīe ģe sāton sūpanwearde Bretene ārest (they occupied the south of Britain first); sūpanweard hit (=pæt land) hæfdon Peohtas (the Picts had the south part of it).

ADJECTIVES.

The weak forms are used:

(1) after the definite article:—seæpela cyning (the noble king); pæsæpelan cyninges, pæl göde meregrol, på gödan meregrolu.

(2) after his:—hās earman landlēode (these poor people, pl.); hes hālga cyning (this holy king), hisses hālgan cyninges.

(3) occasionally after other demonstrative and indefinite adjectives, and often after possessive pronouns:—*pīne dīeglan gold-hordas* (thy hidden treasures).

(4) in the vocative:— pū yfla pēow and slāwa! (thou bad and slothful servant); ēalā pū lēofa cyning! oh, thou dear king).

Note that oper aiways keeps the strong form: pā opru door (the other wild beasts). So also do the possessive pronouns:

 $p\bar{a}s$ $m\bar{t}n$ word (these my words). $\bar{A}n$ in the sense of 'one' keeps the strong form to distinguish it from the weak $\bar{a}na$ = 'alone': pat $\bar{a}n$ $d\bar{e}orwierpe$ mergerot (the one precious pearl).

ARTICLES.

The definite article is omitted as in Modern English before names such as God, and also before Dryhien (the Lord), Dēofol (the Devil), although se Dēofol also occurs, and names of nations:—Bretta cyning (king of the Britons).

It is omitted in many prepositional combinations; not only in those where it is omitted in Modern English also, as in sigefast on sā and on laude (victorious on sea and on land), but also in many others: gewende tō wuda on gēan (went back to the wood); se flothere fērde eft tō scipe (the army of pirates went back to their ships); hē fēng tō rīce (he took the government—came to the throne).

The definite article is, on the other hand, sometimes used where it would not be in Modern E., as in se mann='man' (men in general).

The indefinite article is often not expressed at all:—\pat dyde unhold mann (an enemy did that); hē be stealcode on land swā swā wulf (he stole to land like a wolf). Or it is expressed by sum: on \partial \tilde{a}m \text{ land e was sum manu, Lēofrīc gehāten (in that country was a man called L.). Or by \tilde{a}n, as in Modern English:—\tilde{a}n wulf wear \tilde{a} \tilde{a} \text{send to be werienne pat hēafod wif pā \tilde{o}ru dēor (a wolf was sent to protect the head against the other wild beasts).

PRONOUNS.

Hwat is used interrogatively of persons where we should use 'who':—hē nyste hwat hīc wāron (he did not know who they were).

VERBS.

NUMBER.

After <u>alc</u> <u>pāra</u> <u>pe</u> (each of-those-who) the verb is put in the sing., agreeing not with <u>pāra</u> <u>pe</u> but with <u>alc</u>:—<u>alc</u> <u>pāra</u> <u>pe</u> <u>pās mīn word ge hīer</u> p (each of those who hear these my words).

When bal or his is connected with a plural predicate by means of the verb 'to be,' the verb is put in the plural:—bal wāron bā ārestan scipn Deniscra manna be Angel-cynnes land gesāhton (those were the first ships of Danish men which came to the land of the English race).

Impersonal verbs take an accusative of the person, sometimes also with a genitive of the thing.

Others, such as *bynian* (appear), take a dative of the person:—was him ge puht pat hie be hydden pat heafod (they thought they (the Danes) had hidden the head).

TENSES.

There being no future inflection in Old E., the present is used instead:—ne ā b ph nā fre Eādmund Hinguare (Edmund will never submit to H.); gā gē on mīnne wīngeard, and ic selle ēow þæt riht bib (go ye into my vineyard, and I will give you what is right). As we see in this example, there is a tendency to use bēon in a future sense. Another example is gif ic bēo gebunden mid seofon rāpum, sōna ic bēo gewield (if I am bound with seven ropes, I shall at once be overcome). The future is sometimes expressed by will and shall, as in Modern English, though generally with a sense of volition with the one, and of necessity with the other, the idea of simple futurity coming out most clearly in the preterites wolde and scolde:—

Hē ge læhte ane leon pe hine a bītan wolde (he seized a lion

that was going to devour him); hie wendon hat hie scolden mare on fon (they expected to receive more).

The preterite has the meaning of the modern

- (1) Preterite and imperfect:—se sawere ūt ēode his sæd to sawenne, and þā þā hē sēow. (the sower went out to sow his seed, and while he was sowing..).
- (2) Perfect:—hēr is mīn cnapa, bone ic getēas (here is my servant, whom I have chosen);—ūre cyning com nū hēr to lande (our king has just landed here).
- (3) Plupersect:— pā pā gercomon pe ymb pā endlystan tīd comon (when those came who had come at the eleventh hour).

Periphrastic tenses are sometimes formed, as in Modern E., by habbe and hafde with the past participles, and often have the meanings of the modern perfect and pluperfect respectively, as in nu ic habbe gestriened open two pund (now I have gained two other pounds), but even the pluperfect often has the sense of a simple preterite. The participle is undeclinable in the later language, but originally it was declined, being really an adjective in apposition to the noun or pronoun governed by habban: hie hafdon hiera cyning aworpenne (they had deposed their king).

The pluperfect sense is often indicated by the addition of the adverb $\bar{\alpha}r$ (before):—his sweora, he $\bar{\alpha}r$ was for slagen (his neck, which had been cut through).

The periphrastic forms of intransitive verbs are formed with wesan:—sibban hie āfarene wāron (after they had gone away). Here the participle always agrees with the noun or pronoun with which it is connected.

The periphrases with the present participle have no distinctive meanings of duration, &c.:—ān mam was eardiende on Israhēla þēode, Manuē ģe hāten (a man dwelt in Israel called Manue).

PASSIVE.

The passive is formed with zvesan or zveorpan with the past participle. These forms are very vague in meaning, and the distinction between the two auxiliaries is not clearly marked, but zvesan appears to indicate a state, zveorpan an action.

wearh gerlufod is generally preterite or perfect in meaning: ān wulf wearh ā send (a wolf was sent); mīne lēofe þegnas, þe on hiera beddum wurdon of slægene (my beloved thanes, who have been killed in their beds).

wæs gelufod, indicating a state, is naturally pluperfect in meaning:—se ærendraca sægde his hlāforde hū him geandwyrd wæs (the messenger told his lord how he had been answered).

SUBJUNCTIVE.

The subjunctive states something not as a fact, as in the indicative, but merely as an object of thought. Hence it is used to express wish, conditions, doubt, &c.

A. In principal sentences.

Wish and command (often nearly equivalent to the imperative):—pas him sie wulder and lof ā būtan ende (therefore let there be to him praise and glory ever without end); ne hē ealu ne drince nāfrē oppe wīn (nor shall he ever drink ale or wine).

B. In dependent sentences.

The chief cases are the following:-

(1) In indirect narrative and question: seo cwen sægde þæt hiere nære be healfum dæle ge sægd be Salomones mærþo (the queen said that she had not been told about Solomon's glory by half); ic āscige hwær seo offrung se (I ask where the offering is); menu woldon seeawian hū hē læge (men

wished to see how he lay). When the statement in the indirect narration is perfectly certain in itself, and not merely accepted on the authority of the speaker, it is put in the indicative:—hē hiere sægde on hwæm his mihi wæs (he told her what his strength consisted in).

(2) After verbs of desiring and commanding:-

be life after minum leofum begnum (that I desire and wish with heart that I may not remain alone after my dear thanes).

- (3) To express purpose:—by læs ge hone hwæte a wyrt-walien (lest ye root up the wheat);—Dryhten as tag niher, to bæm hæt he ge sawe ha burg (the Lord descended, in order that he might see the city).
- (4) To express result:— $b\bar{u}$ næfst $b\bar{a}$ milite bat $b\bar{u}$ mæge him wib standan (thou hast not the power that thou canst withstand him).
- (5) To express hypothetical comparison (as if):—se wulf folgode for mid pæm hēafde, swelce hē tam wære (the wolf followed on with the head, as if he were tame); hē ģe lāhte āne lēon, and tō bræġd hīe tō styċċum, swelce hē tō tārēre tiċċen (he seized a lion and tore her to pieces, as if he were rending a kid).
- (6) In conditional clauses, generally with gif or būtan, and in concessive clauses with pēah, pēah pe:—God wāt pæt ic nyle ā būgan fram his bīgengum āfre, swelte ic, libbe ic (God knows that I will not swerve from his worship ever, whether I die or live); pās flotmenn cumap, and pē cwicne ģe bindap, būtan pū mid flēame pīnum fēore ģe beorge (these pirates will come and bind thee alive, unless thou savest thy life with flight); God hielt Ēadmund hālne his līchaman op pone miclan dæġ, pēah pe hē on moldan cōme (God will keep Edmund

with his body whole until the great day, although he has come to earth—been buried). Sometimes the idea of 'if' must be got from the context:—clipiap to pissum gieftum swā hwelce swā gē gemēten (summon to this wedding whomsoever ye meet,—if ye meet any one); hīe behēton hiere sceattas wip pām pe hēo be swice Samson (they promised her money in consideration of her betraying Samson,—if she would..).

When the statement is assumed as unreal, instead of merely hypothetical, as in the above instances, both clauses are put in the subjunctive, the preterite being substituted for the present, as in Modern English also, where if I were... implies I am not... The modern distinction between if I were and if I had been, the former corresponding to the present indicative I am not, the latter to the preterite I was not, is not made in Old English, which uses gif ic ware in both instances. Sometimes the 'if'-clause has to be supplied in thought:—mē lēofre ware pat ic on ģefeohte fēolle wib pām pe mīn folc moste hiera eardes brūcan (I would rather fall in fight that my people might possess their country), where we must supply some such clause as ģif hit sva bēou mihte (if it might be so—if it were possible to save my people by my death).

- (7) In clauses dependant on a negative sentence:—nis nān ping pe his mihte wip stande (there is nothing that resists his might). Sometimes the negation must be gathered from the context, as in se hālga is mārra ponue mēnn mæģen ārsmēan (the saint is more illustrious than men can conceive = the saint is so illustrious that no men can conceive it).
- (8) In other cases, to express uncertainty, futurity, &c.: \$\bar{p}\tilde{n} r\tilde{i}\tilde{e} \tilde{g}e^{w\tilde{i}tt} fram \$b\bar{e}\$, of \$bat \$b\bar{u}\$ wite \$bat\$ God \$gewielt manna \$r\tilde{i}\tilde{e}\$ (thy kingdom shal depart from thee, till thou knowest that God rules the kingdoms of men); uton

weorpian ūrne naman, ār pām pe wē sīen tō dālde geond calle eorpan 1 (let us make our name famous, before we are dispersed over the earth).

The preterite subjunctive is often expressed by should and with an infinitive, as in Modern English.

Scolde is used after verbs of desiring, requesting and commanding:—biddende pone Ælmihtigan þæt hē him ārian scolde (praying the Almighty to have mercy on him). In the following example the verb of commanding is understood from the noun ārende:—hē sende tō þæm cyninge bēotlic ārende, þæt hē ārbūgan scolde tō his maunrādenne, ģif hē his fēores rōhte (he sent to the king an arrogant message, that he was to turn to his allegiance, if he cared about his life).

Wolde is used after verbs of purpose:—se cyning ëode inn pat he wolde ge sëon pā pe par satou (the king went in to see those who were sitting there).

Infinitive.

After verbs of commanding the infinitive often seems to have a passive sense:—hīe hēlon him sendan māran fullum (they ordered that more forces should be sent to them). So also after verbs of hearing, &c.:—hal māste wal he wē setšan hīerdon (the greatest slaughter we have heard told of). In such cases an indefinite pronoun has been omitted: 'ordered them to send..' etc.

GERUND.

The gerund is used-

- (1) to express purpose:— $\bar{n}t$ $\bar{e}ode$ se sāwere his sād tō sā-wenne (the sower went forth to sow his seed).
- (2) it defines or determines an adjective (adverb or noun): hit is scandlic ymb swelc to sprecenue (it is shameful to speak of such things).

PREPOSITIONS.

Some prepositions govern the accusative, such as *burh* (through), *symbe* (about); some the dative (and instrumental), such as *after* (after), $\bar{c}r$ (before), cl (at), be (by), binuan (within), $b\bar{u}lan$ (without), for (for), fram (from), of (of), $l\bar{o}$ (to).

Some govern both accusative and dative, such as ofer (over), on (on, in), under (under). The general rule is that when motion is implied they take the accusative, when rest is implied, the dative. Thus on with the accusative signifies 'into,' with the dative 'in.' But this rule is not strictly followed, and we often find the accusative used with verbs of rest, as in hē his hūs getimbrode ofer stān (he built his house on a rock), and conversely, the dative with verbs of motion, as in hīe fēollon on stānihte (they fell on stony ground).

As regards the use and meaning of the prepositions, it must be noticed that *in* is very seldom used, its place being supplied by *on*, the meaning 'on' being in its turn often expressed by *ofer*, as in the passage just quoted.

When a thing is referred to, $p\bar{c}r$ is substituted for hit, the preposition being joined on to the $p\bar{c}r$, so that, for instance, $p\bar{c}r$ -to corresponds to $t\bar{c}$ him; hie $t\bar{c}$ door bone cyning $t\bar{c}$ and $t\bar{c}$ corresponds to $t\bar{c}$ him; hie $t\bar{c}$ (they led the king to a tree, and tied him to it). So also $t\bar{c}r$ -becastan is equivalent to 'east of this (country).'

Prepositions sometimes follow, instead of preceding the words they modify, sometimes with other words intervening: hie scuton mid gafelocum him tō (they shot at him with missiles); hie cwādon him betwēonan (they said among themselves); hām Ælmihtigan tō lofe, he hīe on gertiefdon (to the praise of the Almighty, in whom they believed), where on

refers to the indeclinable pe. So also in $pat h\bar{u}s pe h\bar{e}$ inne wunode (the house he dwelt in).

Where the noun modified by such a preposition is not expressed, the preposition becomes an adverb: se cyning sende his here tō, and for dyde pā mannslagan (the king sent his army to the place, and destroyed the murderers).

NEGATION. '

The negative particle is ne, which drops its e before some common verbs and pronouns, as in nis = ne is, $n\bar{a}n = ne$ $\bar{a}n$. The negative particle is prefixed to every finite verb in a sentence, and to all the words besides which admit the contracted forms:— $t\bar{o}$ - $cw\bar{v}$ esed $hr\bar{e}$ od $h\bar{e}$ ne for $br\bar{e}$ ett (he breaks not the bruised reed), hit $n\bar{a}$ ne $f\bar{e}$ oll (it did not fall); $n\bar{a}n$ mann nyste- $n\bar{a}n$ ping (no man knew anything). So also with ne. ne=' neither . . nor': ne flitt $h\bar{e}$ ne $h\bar{e}$ ne $hr\bar{e}$ mp (he neither disputes nor cries out).

CORRELATION.

Correlation is often more fully expressed in Old than in Modern English, as in $b\bar{a}$ $b\bar{a}$ mem $sl\bar{e}pon$, $b\bar{a}$ $c\bar{o}m$ his $f\bar{e}onda$ sum='when the men slept, then came one of his enemies.' In $b\bar{a}$ $b\bar{a}=$ 'when' the two correlatives are brought immediately together:— $b\bar{a}$ $b\bar{a}$ $h\bar{e}$ $s\bar{e}ow$, sumu $h\bar{e}$ $f\bar{e}ollon$ wib weg='then when he sowed, some of them fell by the road.' In the following example the conjunction bat is correlative with the pronoun bat:—bas ic gewilnige bat ic ana ne be life after $m\bar{u}um$ $l\bar{e}ofum$ begnum—'that I desire, that I may not remain alone after my dear thanes.' Sometimes a word is used to include both the demonstrative and the relative meaning:— $h\bar{e}$ ge br oh the the

WORD-ORDER.

The Old English word-order resembles that of German in many respects, though it is not so strict, thus:—

The verb comes before its nominative when the sentence is headed by an adverb or adverbial group, or when the object or predicate is put at the head of the sentence:— $b\bar{a}$ covap se cyning (then said the king); \bar{a} rest varon buend pisses landes Brettas (at first the Britons were the inhabitants of this country); on his dagum comon \bar{a} rest p reo scipu (in his days three ships first came); p at $b\bar{a}$ ron olfendas (camels carried it); $m\bar{a}$ re is se God p Daniel on b e lief p (great is the God that Daniel believes in).

The infinite often comes at the end of the sentence; we magon eow ræd gelæran (we can teach you a plan).

The finite verb often comes at the end in dependant sentences, an auxiliary verb often coming after an infinitive or participle; bet waron ba arestan stipu Deniscra manna be Angel-cynnes land gesahton (those were the first ships of Danish men which came to the land of the English race); bet maste wal be we seegan hierdon of bisne andweardan dag (the greatest slaughter that we have heard tell of up to this present day); bat hie bone Godes mann arbitan scolden (in order that they should devour the man of God).

There is a tendency to put the verb at the end in principal sentences also, or, at least, to bring it near the end: hiene man of slog (they killed him); hie bar sige namon (they got the victory there).

1. 61, fisca. Gr. 41. 3.

1. 63. pæm, those.

hider on land, lit. hither on to land, = to this land.

1. 74. bletsian. The older form of this word is bledsian. It is a derivative of blod, like riesian from rice, with mutation of the root vowel. Its original meaning was to 'sprinkle with blood,' and hence, in heathen times, to 'consecrate,' especially to consecrate an altar by sprinkling it with the blood of the victim.

1. So. godspell. The original form of this word was probably godspell='good tidings,' a literal translation of the Greek enaggélion.

Afterwards the first vowel was shortened before the following consonantgroup, or else god was directly substituted for god, as giving a more evident meaning, the result being that the word was taken in the sense of 'God's tidings.' In this form it was adopted into Icelandic (guðspiall) and Old High German (gotespel), having been introduced by the Old English missionaries.

II. FROM THE GOSPEL OF ST. MATTHEW.

- 1. 1. pās mīn word. Gr. 43. 8.
- 1. 16. aweorpe. Gr. 49. (8).
- 1. 20. hit refers back to sad, 1. 18.
- l. 23. up sprungenre sunnan. Gr. 41. 2.
- 1. 28. is geworden. An over-literal rendering of the Latin factum est.
- 1. 32. hine, reflexive, Gr. 19.
- 1. 40. tō forbærnenne. We see here how out of the active 'in order to burn it' may be developed the passive 'in order that it may be burnt,' as in the modern E. 'a house to let.' Compare Gr. 50. 4, (1).
 - 1. 52. on hiera fatu. Compare I. 137.
- 1. 60. ģewordenre ģecwidrædenne pæm wyrhtum. A very stiff adaptation of the ablative absolute of the original, 'couventione autem facta cum operariis.' pæm wyrhtum is to be taken as a dative of the person affected (Gr. 4x).
- 1. 67. dyde pēm swā ģelīce. The Latin has simply 'fecit similiter.' The sense is 'did like to it' (like his former proceeding), the swā heing pleonastic.
 - 1. 86. pest. Gr. 21.
 - I. go. suna, dative, 'for his son.'
- 1. 106. giefthùs. hūs must here be takeu in the sense of 'hall,' 'chamber.' In Icelandic the plural hūs is regularly used to denote the group of buildings (often detached) constituting a house or homestead, the kitchen, for instance, which was originally detached, being still called eldhūs (fire-house).
- 1. 107. pæt he wolde geseon. This clause is due to a confusion of two constructions, (1) he wolde geseon, (2) pæt (in order that) he gersewe.

III. OLD TESTAMENT PIECES.

The first two pieces are taken from Ælfric's translation of the Heptateuch, first published by Thwaites in his Heptateuchus, and afterwards by Grein as vol., i. of his Bibliothek der angelsächsischen Prosa—Genesis xi. and xxii. The other three are from Ælfric's Homilies (edited by Thorpe)—ii. 584 foll., i. 570, ii. 432.

- 1. 4. him betweonan. Gr. 51. 5.
- 1. 13. læden. This word is the Latin latina (=lingua latina) used first in the sense of 'Latin language,' then of language generally.

- 1. 17. for pam . . for pam pe, correlative, the first demonstrative, the second relative.
- 1. 28. to scoldon. This use of sical with a verb of motion understood is very common.
- 1. 36. him self. him is the reflexive dative of interest referring to Gad—literally, God him-self will appoint for him self. In such constructions we see the origin of the modern himself, themselves.

11. 46, 47. nū..nū, correlative, = now..now that, the second ni being almost causal (since).

L 51. hæfde . . to, took . . for.

1. 52. Gode to lace. Gr. 40. (1).

1. 57. min ege, objective genitive, 'the fear of me.'

mare, neut. 'a greater thing,' 'something more important.'

1. 81. märe. Cp. 1. 57.

1.82. wære. Gr. 49. (7).

1. 89. hwæs is governed by giernde, by 'attraction.'

l. 135. mičle, adverb.

1. 137. wære. Gr. 49. (7).

1. 153. beliefan is a later form for geliefan.

1. 156. to handum. Cp. 1. 122 above.

1. 174. Er genam. Gr. 46. 6.

1. 200. fram mannum. fram here, as usual, denotes the agent 'by' in passive constructions.

1. 202. wite. Compare Gr. 48. (3) and 49. (8).

IV. SAMSON.

From Ælfric's translation of the Book of Judges in Thwaites' Heptateuch.

I. 8. onginp to aliesenne, will release. onginnan is often used pleonastically in this way.

1. 35. Gaza gehäten. When a name together with gehäten is put in apposition to another noun it is left undeclined, contrary to the general principle (Gr. 42. 6).

l. 41. swā swā hie belocenu wēron, locked as they were.

ufeweardum pēm onolle. Gr. 43.2.

1. 46. was, consisted.

1. 51. geworhte. We should expect geworhtum (Gr. 42. 5). Perhaps the nom. is due to confusion with the construction with a relative clause—pe of simum geworhte sind.

- 1. 74. Dagon gehäten. Compare l. 35.
- swelce, 'on the ground that'-' because (as they said).'
- 1. Sr. heton. Compare I. 106.
- 1. 87. forp is often used pleonastically in this way with mid.

V. FROM THE CHRONICLE.

1. 2. her sind, there are here. her is here used analogously to par, as in II. 3 and the modern E. there are. Cp. also 1. 12 below.

gepeodu, languages as the test of nationality. It is believed that Latin was still spoken as a living language by the Romanized Britons at the time of the venerable Bede (eighth century), from whose Church History this section was taken by the compilers of the Chronicle.

- 1, 5. Armenia is an error for Armerica.
- 1. 6. Scithie, Scythia,
- 1. S. Norpibernie, North of Ireland.
- 1. 34. hēr, at this date—at this place in the series of entries which constitute the Chronicle.
- 1. 26. Wyrtgeorn is the regular development of an earlier *Wurtigern from the British Vortigern.
 - 1. 28. Ypwinessieot has not been identified; some say Ebbsseet.
 - 1. 45. Æglesprep, Aylesthorpe, a village near Aylesford.
 - 1. 49. Crecganford, Crayford.
- 1. 52. The diction of this passage, with its alliteration and simile, shows that it is taken from some old poem.
 - 1. 61. habne menn, Danes.
- 1. 62. mid Defena-scire, literally 'together with Devonshire,' that is 'with a force of Devonshire men.'
- 1. 64. dux is here written instead of caldormann. So also we find rex for crning.
 - 1. 65. Sandwie, Sandwich.
- 1.68. foorpe healf hund, fourth half=three and a half. This is the regular way of expressing fractional numbers, as in the German viertehalb.
 - 1. 71. Süprige, Smrey.
 - 1. 73. Aclea, Ockley.
- 1. 76. se here, the Danish army. here got a bad sense, through its association with hergian (to harry), and hence is applied only to a plundering, marauding body of men. In the Laws here is defined as

a gang of thieves more than thirty-five in number. The national English army (militia) is called fierd, l. 71, 3 above.

Humbremupa, mouth of the Humber.

1. 77. Eoforwie, York; a corruption of Eboracum.

1.84. inne wurden, get in.

1. 85. sume. Compare IV. 51.

VI. KING EDMUND.

From Ælfric's Lives of the Saints, now in course of publication for the Early English Text Society by Prof. Skeat. The present life has been printed only by Thorpe, in his *Analecta Anglosaxonica* from a very late MS. It is here given from the older MS., Cott. Jul. E. 7.

It will be observed that the present piece is in alliterative prose, that is, with the letter-rime of poetry, but without its metrical form. The alliteration is easily discernible:—com supan ofer sæ fram sancte Benedictes stowe; dæge, to Dunstane, &c.

1. 1. sancte is an English modification of the Latin genitive sancti.

1. 5. sancte is here the E. dative inflection, sanct having been made into a substantive.

1. 39. bilewit=*bile-hwit (with the regular change of hw into w between vowels) literally 'white (=tender) of bill,' originally, no doubt, applied to young birds, and then used metaphorically in the sense of 'gentle,' 'simple.'

1. 70. worhte fleames. This construction of wyrcan with a genitive is frequent.

1. 76. wære, subj. Gr. 48. (6).

1. 85. fuse. The correct reading is probably fuses, but the plural fuse may be taken to refer to Hinguar and his men collectively.

1. 149. gebedhūs. The Weish bettws, as in Bettws-y-coed = chapel in the wood, still preserves the O. E. form nearly unchanged.

I. 176. swa past does not denote result here, but is explanatory—'namely by being bound. . .'

1. 178. hie, reflexive.

I. 179. pes . . hū, correlative.

1. 18g. The reference is apparently to Proverbs xxiv. 11, which (in the Vulgate) runs thus: 'Erue eos qui ducuntur ad mortem.'

1. 200. hwmper, (that he might see) whether ...

1. 215. lichaman, instrumental dative (Gr. 41) of defining.

l. 222. Elig = @l-icg 'eel-island.'

GLOSSARY.

The order is strictly alphabetical (p following t) except that words with the prefix ge are put in the order of the letter that follows the ge (gebed under b, &c.).
